

# WETCAST dosing station

BSC has been specializing for many years in the manufacture of products made of flexible or rigid molds. As such, we can advise you in the development of a modular production unit to meet your needs.

This filling unit can be progressive in order to evolve at the same time as your production.

As the dosing station is one of the main elements, we can have a filling system designed for you for the different types of concrete in weight or volumetric mode.

## Weight or volumetric dosing system of concrete

Filling of all types of molds (metallic, PU, silicone, etc.)

Dosing unit in weight and volumetric mode that can be controlled manually or automatically.

The set is designed for use and maintenance at the end of the post easy and fast.

## Design of the doser according to your needs

The company BSC in connection with the company WMW can offer you different types of dosers studied for your different needs and according to the geometry of the molds used.

In the same way, these feeders can be made especially for concretes :

- Dry with vibration placement
- Semi-placing in vibration placement
- Auto placing with or without fibers
- Cement grout
- Etc.
